An End-to-End Data Pipeline for Box Office Analysis

(22 nov 2025)
-: Presenter :-
Maher Mahmoud Maher

? Project Overview & Objectives

- **The Goal :**

To build a fully automated, serverless data pipeline to ingest, process, and analyze over 100 years of US Box Office data (1902-2024).

- **Key Questions :**

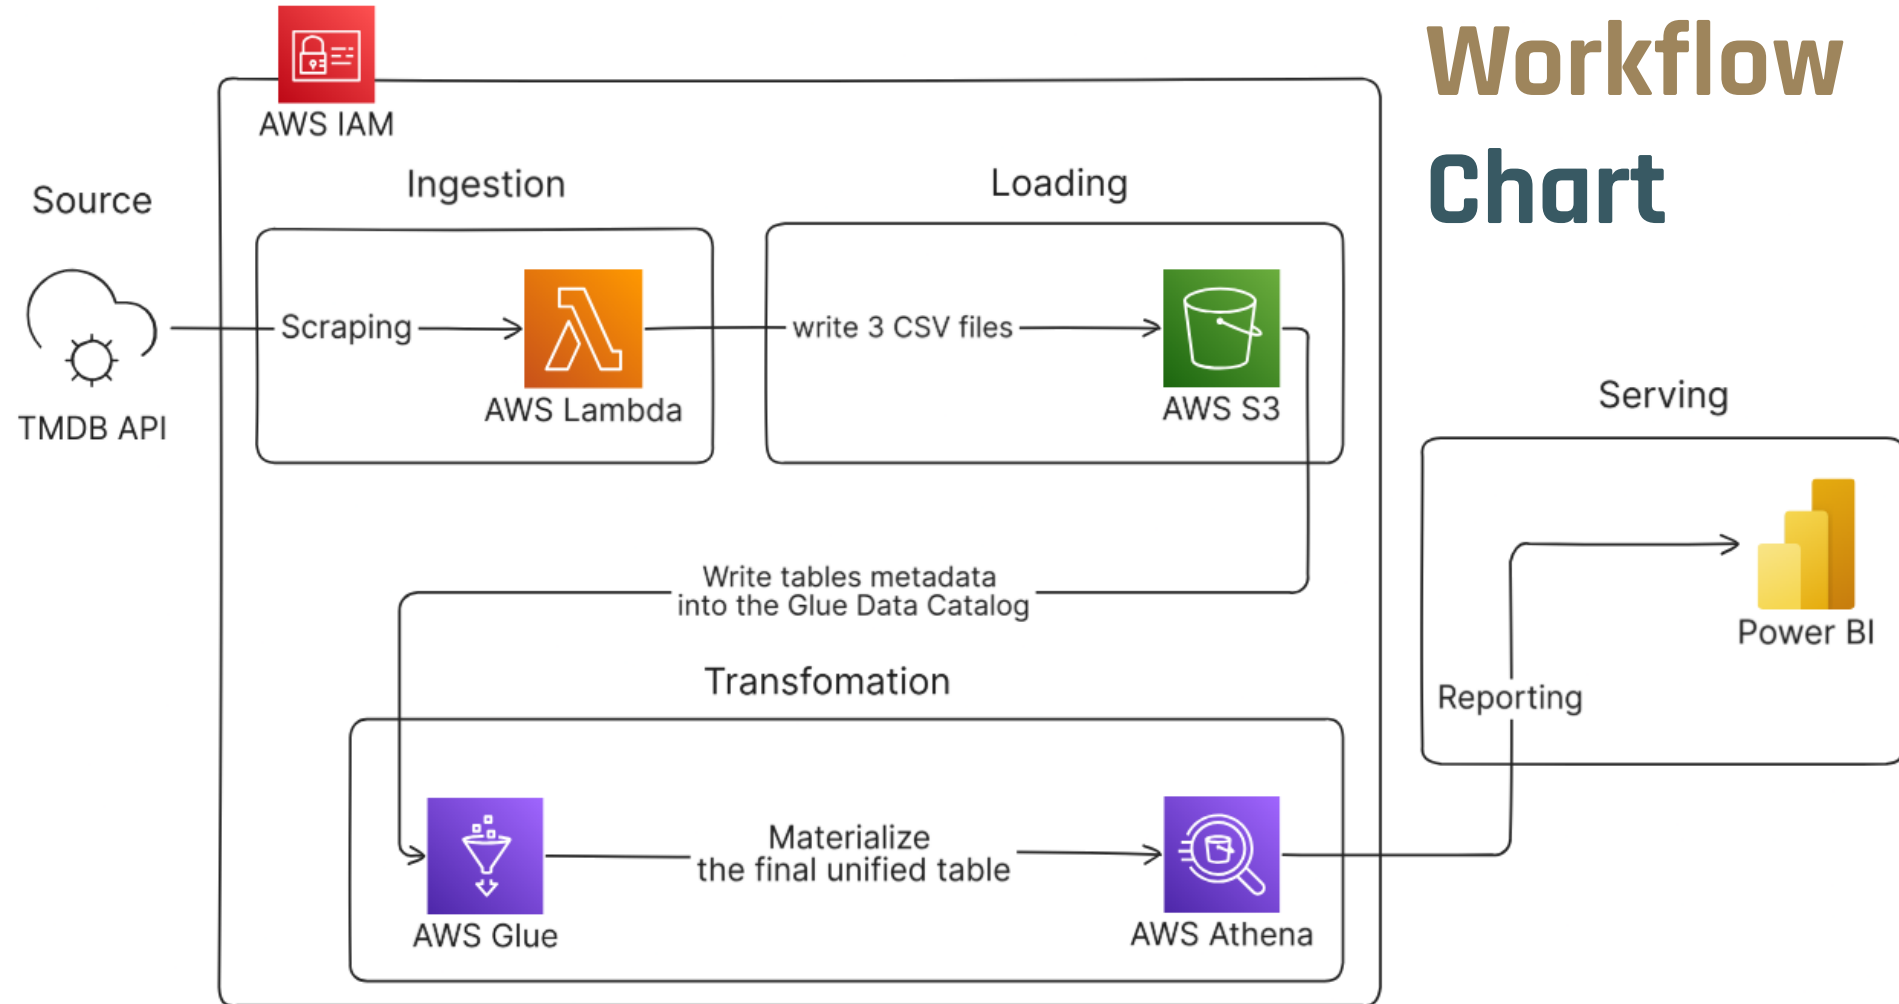

What are the long-term trends in movie production?
Which genres are most common vs. most popular?
How do English and Non-English films compare?
What are the most popular foreign languages in film?

- **Target Audience & Stakeholders :**

- 1- Production Studios – green-lighting new projects
- 2- Film Distributors – picking peak release windows

Workflow Chart

Proposed Tech Stack

An End-to-End Cloud Data Pipeline

<u>Security</u>	AWS IAM	Creating the roles with the needed permissions
<u>Ingest</u>	AWS Lambda	Fetches data from API.
<u>Load</u>	AWS S3	Raw CSVs stored in S3 Data Lake.
<u>Transform</u>	AWS Glue	Crawls metadata and cleans data.
<u>Serve</u>	AWS Athena	Queries the optimized table.
<u>Visualize</u>	MS Power BI	Consumes data via Athena.

Some of faced Challenges

AWS IAM

Selecting the needed permissions for each role

AWS Lambda

Timed out the code from 3sec to 15min
Adding the Environment Variables

AWS S3

Splitting each lambda csv output into separated locations for the crawlers sake (mandatory)

AWS Glue

Configuring the glue crawlers (one per each csv) for parsing the schema

AWS Athena

Creating the unified Table that will be stored in s3

MS Power BI

Using the ODBC service to connect with Athena

Some of the Key insights

- **Quality vs. Quantity :**

Drama and Comedy have the highest volume, but Adventure and Action hold the highest popularity ratings.

- **Seasonality :**

The industry clearly targets Q4 (Oct/Nov) for peak releases, likely aiming for holiday audiences and award seasons.

- **Language Trends :**

French is the dominant foreign language in the US market (739 films), nearly double that of Italian or Japanese.

THANK YOU

Any questions?
